www.electricfeel.com

Dear Professor Dr. Helbing,

ElectricFeel would like to give its full endorsement to the FuturICT flagship project. We are dedicated to growing a partnership of collaboration within this project.

ElectricFeel is a Spin-off company from the Swiss Federal Institute of Technology, founded in 2012, and develops software for planning and operation of electric vehicle fleet systems.

We have already benefited from interacting with the experts of the FuturICT network and receiving support from them. Being a technology startup company in an early stage, this support is very valuable to us. Therefore, we would like build on this successful basis for co-operation and are enthusiastic about joint R&D projects in the field of electric mobility and simulations of behavior in mobility systems.

Sincerely,

Moritz Meenen,

Co-founder and CEO

ElectricFeel Mobility Systems GmbH

Pratik Mukerji,

Co-founder and CTO
